

Synthetic Care Sharing Report Care coordination teams may prepare a de-identified discharge summary for an approved external vendor only after compliance approval. The report contains synthetic sensitive fields: Patient Jane Example, jane.example@example.invalid, +1-555-0100, MRN MRN-000-EXAMPLE, insurance ID INS-000-EXAMPLE, and diagnosis asthma. Before vendor sharing, teams must redact patient names, phone numbers, email addresses, medical record numbers, insurance identifiers, and diagnosis details. The approved model gateway must validate structured responses, keep audit traces, cite retrieved evidence, and avoid sending restricted fields to public models. Compliance officers may review full synthetic reports. Nurses and doctors may use clinical guidance. External vendors may receive only approved public or de-identified summaries.
